PERFORMANCE // IS EVERYTHING®

MINELAB

Locate targets with speed and accuracy.

PRO-FIND Series pinpointers help you to accurately locate targets inside a small hole or crevice where a metal detector coil cannot fit. This results in smaller holes, less environmental disruption and faster target recovery time.

Minelab's DIF technology significantly reduces

interference with an operating metal detector when the pinpointer is switched off, by disengaging the pinpointer's magnetic field and stopping subsequent circulating electrical currents. Therefore DIF eliminates many of the false signals associated with other pinpointers. This is especially

important when using sensitive, high performance metal detectors.

Choose from the PRO-FIND 15, PRO-FIND 20 or the premium PRO-FIND 35 which features an LED flashlight, adjustable sensitivity, Ferrous Tone ID and more.

A PRO-FIND Series pinpointer is an essential part of your detecting tool kit.
